

Multi-channel Circuit Metering System

BJ-MCM1300

User Manual

Version: 1.7

Read me

When you use BJ-MCM1000 series Multi-channel Circuit Metering system, be sure to read this user manual carefully, and be able to fully understand the implications, the correct guidance of operations in accordance with user manual, which will help you make better use of BJ-MCM1000, and help to solve the various problems at the scene.

1. Before the meter turning on the power supply, be sure that the power supply within the provisions of the instrument;
2. When installation, the current input terminal must non-open, voltage input terminals must Non-short circuit;
3. Communication terminal (RS232/RS485 or Ethernet) is strictly prohibited to impose on high pressure;
4. Be sure the instrument wiring consistent with the internal system settings;
5. When communicating with the PC, instrument communication parameters must be consistent with the PC.

- **Please read this user manual carefully**

1. - SUMMARIZE

The MCM1000 Series provides a compact and robust metering solution, enable reliable monitoring of building electrical loads with a low installation cost-per-point by combining sub-metering. The unit performs real-time metering, measures energy consumption for max 18 channel circuits for single phase or 6 channel for three phase circuits.

Advanced communications options including Modbus via RS485, I/O communications provide for extensive reliable data exchange. Multiple units can be connected together to meter unlimited number of circuits. The versatility of MCM1000 meters are ideal for multi-tenant or departmental metering applications within office towers, condominiums, apartment buildings, shopping centers and other multi-user environments.

Measurement Function

Voltage: Line Voltage; Phase Voltage

Current: Total Current; Current per channel

Power and Power Factor: Total power Reactive Power, Apparent Power, Power Factor and for per channel

Frequency: System Frequency

Energy Function

Energy (kWh) measurement meeting international standards, accuracy is Class 1.0.

Over/Under Limit Alarming

Users can select parameters and set their set points. An alarm will be triggered when the setpoint is reached. At the same time, sound and light signals could be sent out via relay output. The time and reason of an alarm event will be recorded.

I/O Option

Standard output ports provide energy (kWh) pulse output and time pulse output; optional 6 channel digital inputs (DI) provide pulse counting from water, electricity and gas meter, and monitor switch status; optional 2 channel relay outputs (DO) react upon alarming conditions.

Communication and Network

Supports RS485 communication open protocol: Modbus RTU;

2. - ELECTRICITY METERING

MCM1000 series has two models:

MCM13xx - three phase measurement, max connect 6 channel three phase circuit

MCM11xx -single phase measurement, max connect 18 channel single phase circuit.

The MCM delivers the of parameters listed by RS485 ports, Blue Jay Technology also provide advanced model can connect display unit show visualization information, and do configuration of the MCM device. In the main display area shows 4 power parameters, with other display area show the various parameters and state of meter on each page jump. For more details of measurement parameters please refer to the subsequent for displays introduction.

Metering parameter overall

Function		Parameter	MCM1310	MCM1320
Real-time Parameter	Voltage	Va, Vb, Vc / Vab, Vbc, Vca	●	●
	Current	per channel / per phase	●	●
	Power	per channel / per phase	●	●
	Reactive Power	per channel / per phase	●	●
	Apparent Power	per channel / per phase	●	●
	Power Factor	per channel / per phase	●	●
	Frequency	per channel	●	●
Energy	Active Energy +	per channel	●	●
	Reactive Energy +	per channel	●	●
	Active Energy -	per channel	●	●
	Reactive Energy -	per channel	●	●
Communication	RS485	Modbus-RTU	●	●
Alarming	Over/Under Limit Alarm		○	●
I/O	6DI & 2DO		○	●
Display	External LCD display	(RS485 connection)		●

Notes: "●" for Standard; "○" for Optional; Blank means Not Available

3. - SPECIFICATIONS

Reference standard:

Basic electricity: IEC 61557-12:2007
 Active energy: IEC 62053-21:2003
 Reactive energy: IEC 62053-23:2003

Accuracy standards

Parameter	Accuracy	A phase	B phase	C phase	All
Voltage	0.2	V1	V2	V3	
Current	0.2	A1	A2	A3	
Active Power	0.5	W1	W2	W3	W
Reactive Power	0.5	var1	var2	var3	var
Apparent power	0.5	VA1	VA2	VA3	VA
Power Factor	0.5	PF1	PF2	PF3	PF
Active Energy	1				Wh
Reactive Energy	2				varh
Frequency	0.1				Hz

Input

Voltage: Rated 40~400V
 Current: Rated 5A (optional 1A)
 Frequency: 45-65Hz

Overload

Current: 1.2 times rated continuous; 5 seconds for 10 times the rated
 Voltage: 30 seconds for 2 times the rated

Dielectric strength

IEC/EN 61010-1:2010
 2kV AC RMS 1 minute, between input / output / case / power supply

EMC Test

	standard	Test voltage
Electrostatic discharge immunity test:	IEC-61000-4-2 level 4	8Kv
Electrical fast transient burst immunity test	IEC61000-4-4 level 3	Input 1kV; Power supply 2kV
Surge (Shock) immunity test	IEC61000-4-5 level 4	common mode test voltage 4kV

Work environment

Temperature: -15C~ +55C

Humidity: RH 20%~95% (No condensation)

Storage Conditions

Temperature: -25C~+70C

Humidity: RH 20%~95%

Working Power

AC 80-265V, 45-65Hz, DC 100-350V

DC 20-60V (Optional)

Maximum power consumption 6W

Dimensions

L x H x D =180mmx122mmx48mm

Installation

35mm Din-Rail

4.- INSTALLATION AND START-UP

The manual you hold in your hand contains information and warnings that the user should respect in order to guarantee a proper operation of all the instrument functions and keep it in safety conditions. The instrument must not be powered on and used until its definitive assembly is on the cabinet's door.

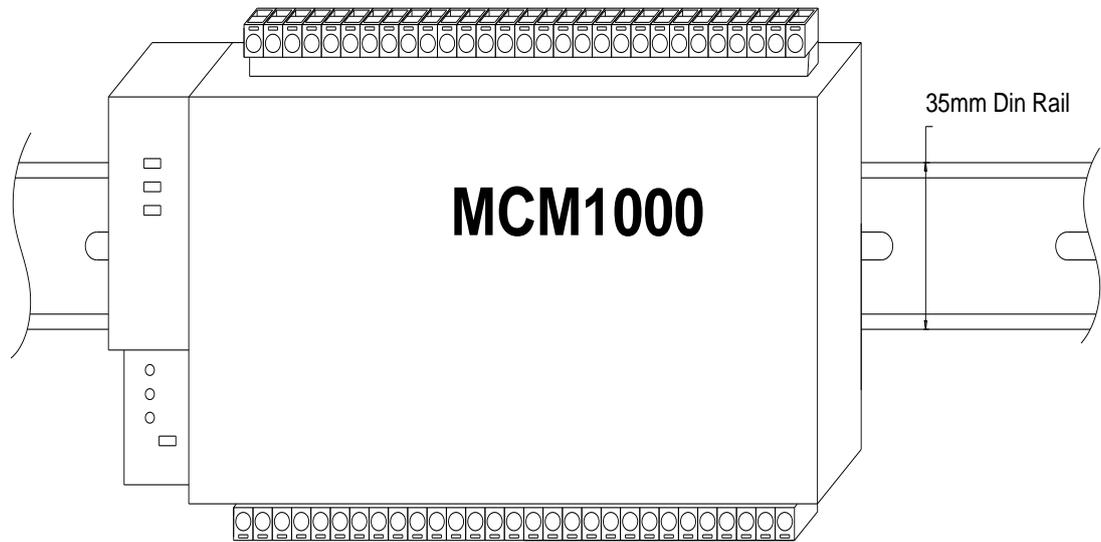

If the instrument is not used as manufacturer's specifications, the protection of the instrument will be damaged.

When any protection failure is suspected to exist (for example, it presents external visible damages), the instrument must be immediately powered off. In this case contact a qualified service representative.

4.1.- Installation

Mounting

This meter is DIN rail mounted, which fits 35 mm standard rails. Keep all connections into the cabinet. Note that with the instrument powered on, the terminals could be dangerous to touch and cover opening actions or elements removal may allow accessing dangerous parts. Therefore, the instrument must not be used until this is completely installed.

Notes:

Input signal: MCM1000 using a separate acquisition calculate for each measurement channel, to ensure consistent in use, for different load forms, it's a variety of connection mode. Access wire shall be met: the current 2.5 square mm, voltage of 1.5 square millimeters.

A. Voltage input:

Input voltage should not exceed the rated input voltage products (100V or 400V), Otherwise, you should use external CT. Suggest 1A fuse be installed in the voltage input side.

B. Current Input:

Standard input current is 5A, if greater than 5A should use external CT.

When the CT is connected with other instruments, make sure wiring methods be used in series.

Before remove the current input connection, must be sure to disconnect the primary circuit or shorted secondary circuit of CT. In order to facilitate disassembly, please do not connect to CT directly, and the terminal block is suggested.

C. Please make sure that the input voltage and current corresponding to the same phase sequence, and the same direction; Otherwise, the Values and symbols will be wrong!! (Power and Energy)

The input network configuration of instrument depends on the CT number of the system:

in the condition of 2 CT, select the three-phase, three-lines two components;
in the condition of 3 CT, select the three-phase, four-lines three component mode.

Instrument connection mode, set of the instrument (programming input network NET) should be the same load wiring as measured wiring. Otherwise, the measurement instrument will lead to incorrect voltage or power.

In three-phase three-wire mode, the measurement and shows the line voltage;
In three-phase four-wire mode, the measurement and shows the phase voltage.

Auxiliary power:

MCM1000 Series with universal (AC / DC) power input, if not for a special statement, we provide the 220VAC or 110V/DC power interface for standard products. Instruments limit work power supply: AC: 85-265V / DC: 100~300V, please ensure that the auxiliary power can match with MCM1000 series meter to prevent damage to the product.

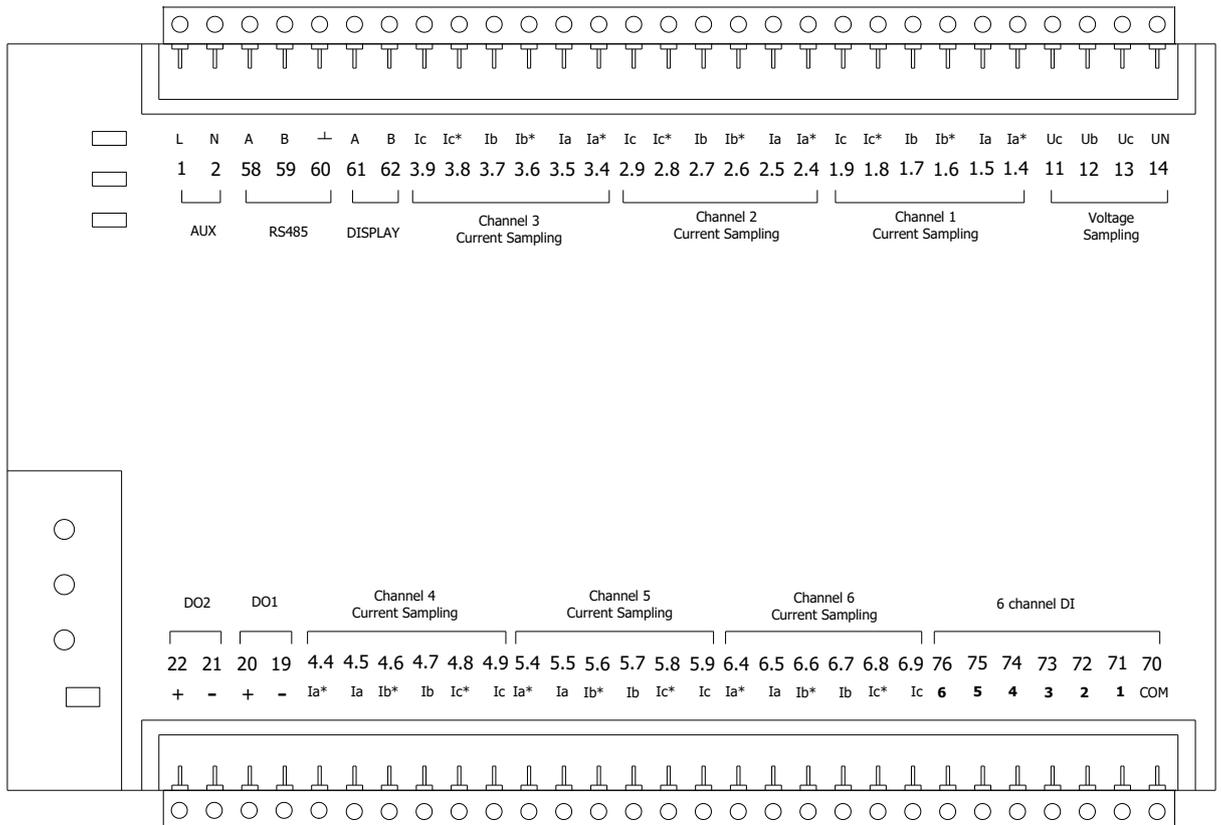

- A. Suggest install 1A fuse in the fire line side.
- B. For the areas with poor power quality, suggest install lightning surge suppressor and rapid burst suppressor to prevent lightning strikes.

4.2. - Connection Terminal

Meter Base Terminals:

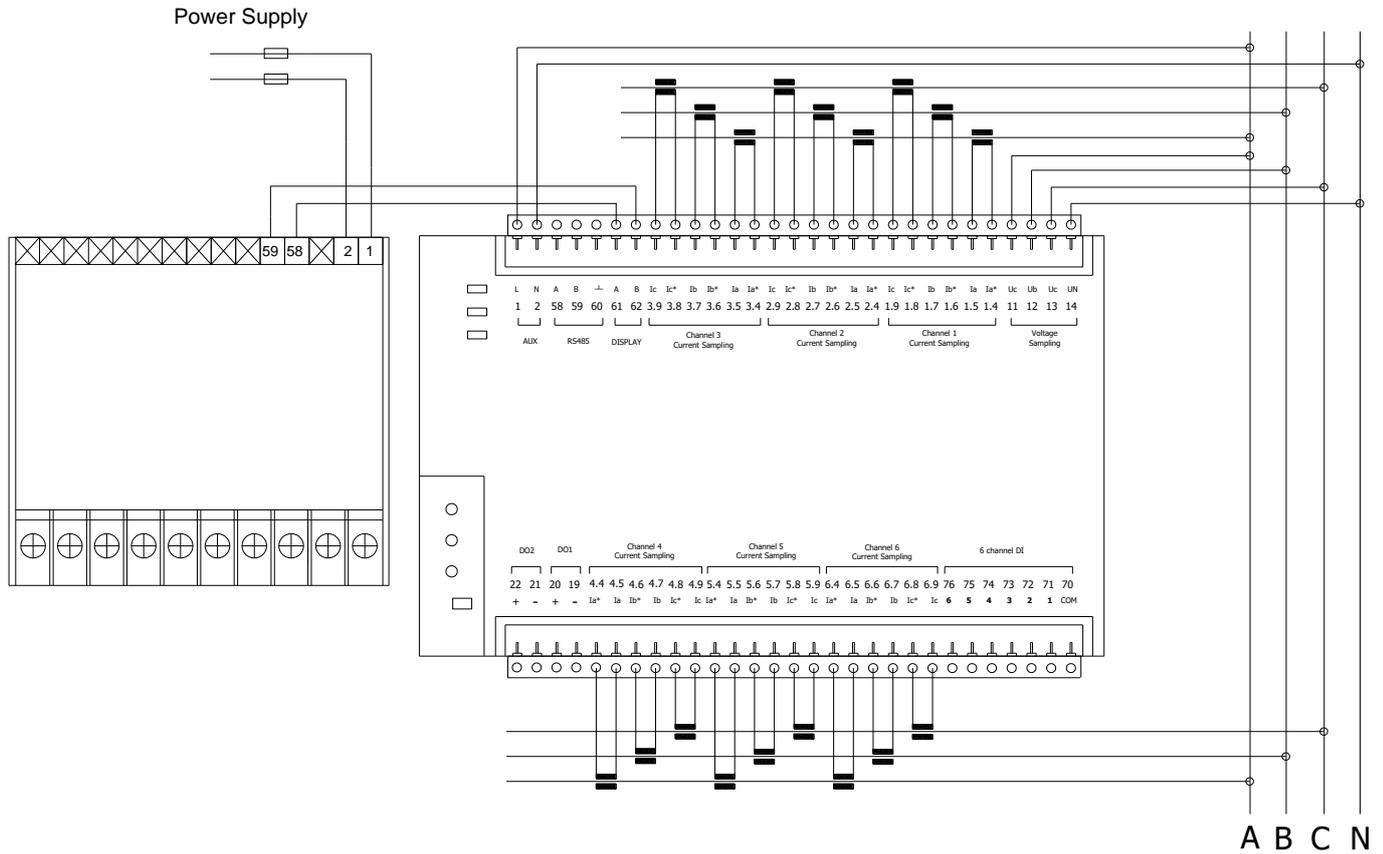

Upper row: Digital input, Current Sampling (4-6) Pulse Output, Relay Output

Lower row: Voltage sampling, Current Sampling (1-3), Display port, Communication, Power Supply

Notes: The terminal pin will change depends on customer order; please refer to the label on the meter!

Typical wiring- 3P4W (max 6channel)

IMPORTANT REMARK!

If power = -0.01 is shown for any of the phases and voltage and current are not zero for this phase, check out following points:

- Assure that A, B and C phases coincide in voltage and current.
- Correct polarity? Reverse the current transformer placed at this phase.

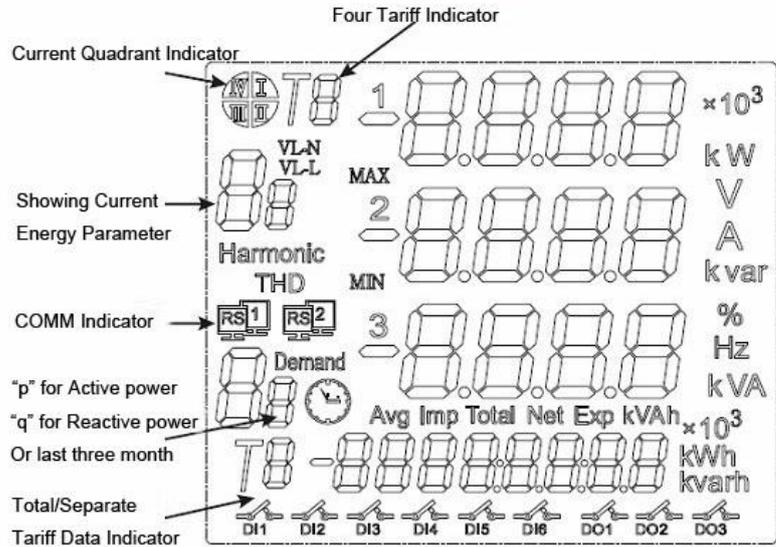

Note: This connection drawing is for reference only; the actual connecting terminal please refer to the label on the rear part.

5. SCREEN DISPLAY

5.1. - Panel Diagram

MCM1000 optional LCD screen module, connect to RS485 wire to MCM body "DISPLAY" pin, provide electrical data display and on-site configuration.

Note: If your MCM do not have external display unit, please skip chapter 5 and chapter 6, and use RS485 port for operation.

5.2.- Display unit

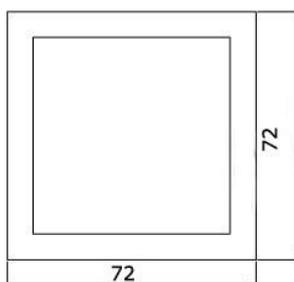

connection

Display unit shape and size are same as 194 series power meter. need 85~265VAC/DC AUX power, RS-485 cabling must be carried out with a meshed screen cable (minimum 3 wire), diameter of not less than 0.5mm^2 , with a maximum distance of 50m between the MCM1000 and the display unit

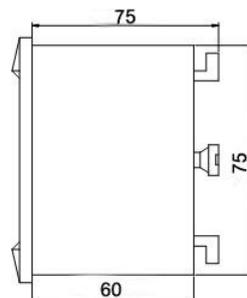

This unit is to be mounted on panel (cut-out $70+0.8 \times 70+0.8 \text{ mm}$). Keep all connections into the cabinet.

Note that with the instrument powered on, the terminals could be dangerous to touch and cover opening actions or elements removal may allow accessing dangerous parts. Therefore, the instrument must not be used until this is completely installed.

size of display unit

Front view

Side view

6. - OPERATION MODE

When the MCM1000 and display unit are powered up, the entire symbol will be on, and the meter starts to self- test. After some seconds, the meter is ready for operation and shows one of the available screens.

Parameters on display can be switched by pressing key  or  LCD shown on screen at any moment

When the key  is pressed, the screen CURRENT values of each phase are now showing.

Pressing again the key , the screen will show the following parameters successively.

In setting menu, pressing key  move the setting cursor to left;

Pressing  can enter the number 0 ~ 9.

This key named "SET" key, pressing it can open the programming menu and return to previous menu.

This key named "Enter" key, pressing this key you can exit it with saving any modification that you might have done, in menu operation press "Enter" key, and user can go to the next menu.

Note:

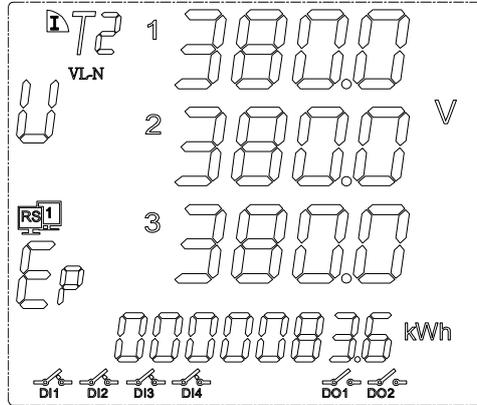

Press key  or  in normal standby status, and the meter will show different data in main screen:

In the menu set mode, when changes the parameter and exit setting, the meter will ask to "SAVE",

press  *exit without saving*

press  *save and exit.*

Screen 1: Displays the three phase voltage U_a, U_b, U_c ;
 As shown: $U_a = 380.0V; U_b = 380.0V; U_c = 380.0V$;

In the bottom character “Ep” show **total active energy** is 83.6KWh.

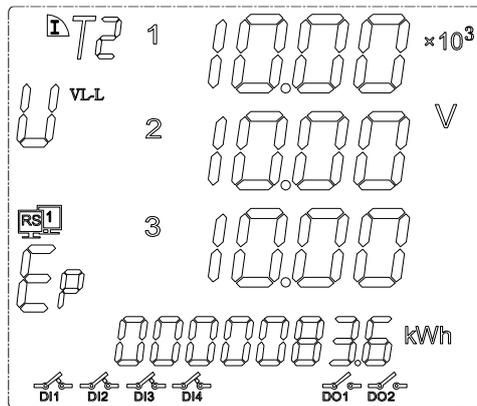

In other display area region show the system information:

DI1, DI2, DI3, DI4 in the close state;

DO1, DO2 in the open state;

Communication transceiver normal;

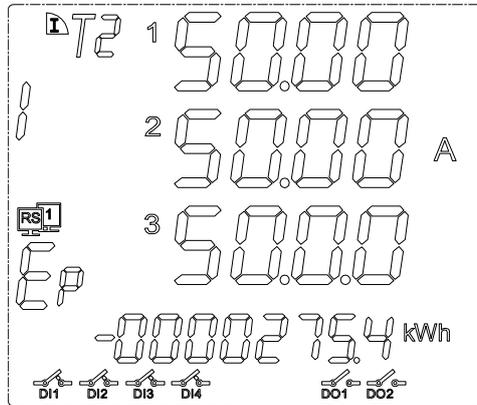

Note: Detail information for each symbol, please refer **chapter 5**, following sections as same

Note: in the high voltage measurement, $X10^3$ mean the showing voltage value multiplied by 1000, in the screen diagram mean the voltage is $10 \times 1,000 = 10,000$ volt

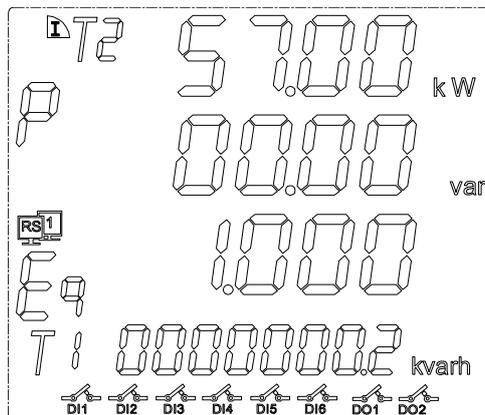

Screen 2: Display the three-phase current Ia, Ib, Ic.

In the bottom **Ep** shows **total negative active energy**.

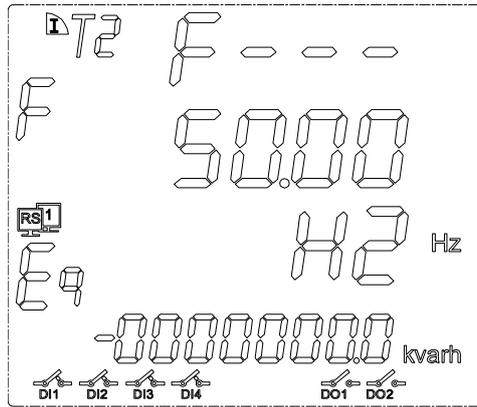

Screen 3: Display the total active power, total reactive power, and total factor.

In the bottom **“Eq”** shows **total active energy**.

Screen 4: Display the frequency of a phase.

In the bottom **“Eq”** shows **total negative reactive energy**.

7. - SETUP PROCEDURE

This chart just suits MCM1310 and MCM1110, or client optional display unit, other models please skip this chart to RS485 communication guide, use any series scan programming also can do same setting!!

Once into the SETUP, use the keyboard to select different options and enter required variables:

7.1.- Input Password

A 4-figure password is required to be entered (in case that in case that the meter will work without permission.)

At normal display mode, press  to enter the programming mode, meter display

Meter display “  ”,
 ,

Ask for the password. Press  to input the password number, from “0~9”. Press  to move the cursor. After password switch press  to confirm the input.

If password is correct, meter can enter next setting.

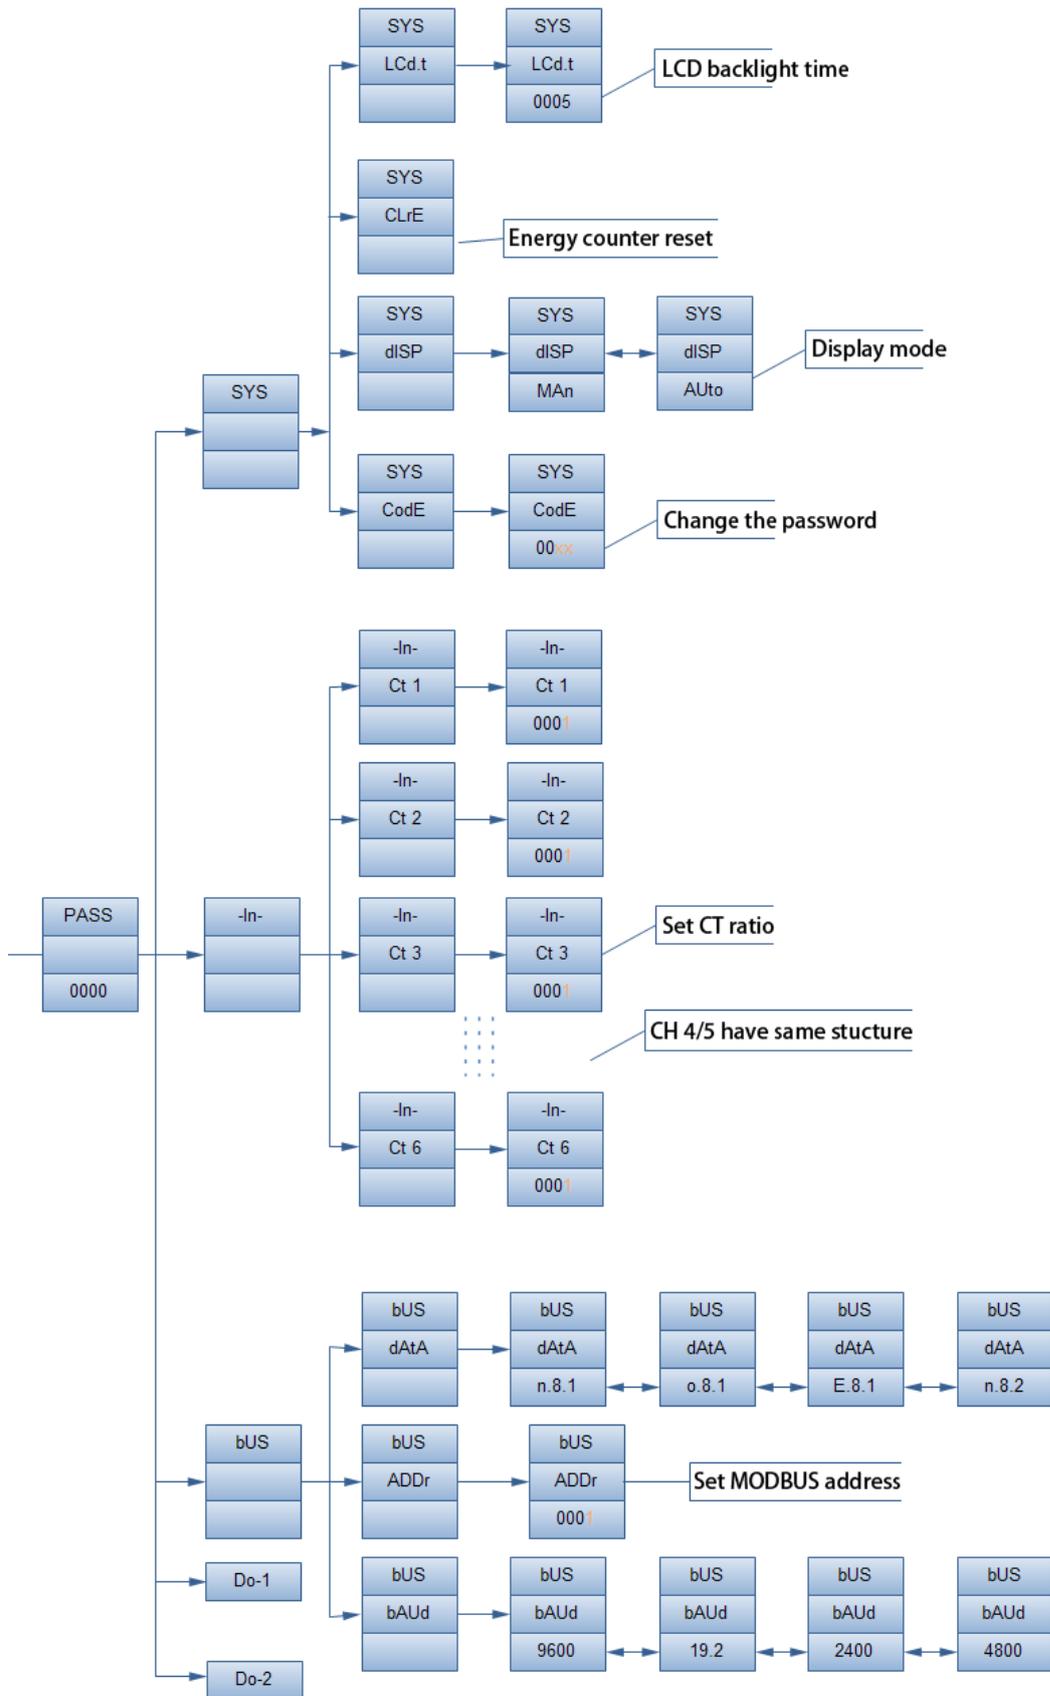

Notes: the default password is 0001.

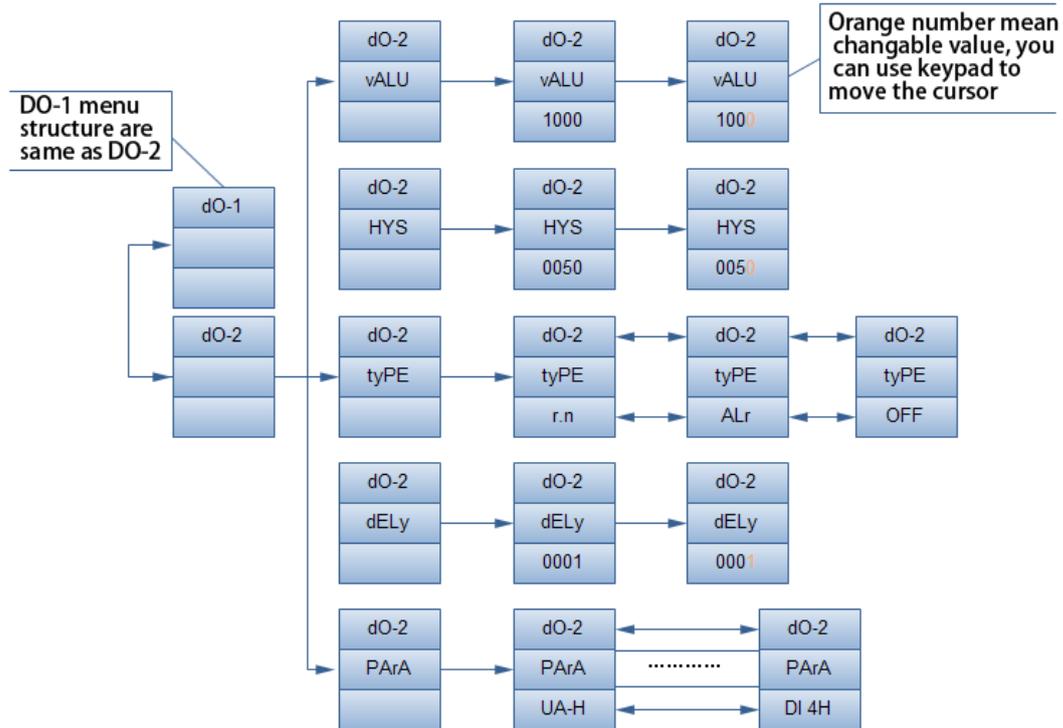

7.2.- Menu tree quick guide

In the Setup menu, include following 4 parts:

SYS
-IN-
BUS
DO

Sub-menu please refer to following drawing:

7.3. – Details explain of menu structure

level 1	Level 2	Level 3	Description
(System setting) SYS	(LCD backlight time) LCd.t	0000~1000	Factory default is 0005
	(Energy counter reset) CLr.E		Unrecoverable for Clear data
	(Display mode) dISP	0-99	0 for manual switching, 1-99 for X sec auto switch to next screen Factory default is manual
	(Change the password) CodE	0000~9999	Default is 0001
(Signal input) -IN-	(Net) Lin.e	N.3.4, N.3.3, N.1	Select the input signal network measurement
	(Voltage Range) U.SCL	100V, 220V, 380V	Select the range of measured voltage signal
	(Current Range) I.SCL	5A and 1A	Select the range of measured current signal
	(Voltage transformation ratio) R.PT	1-9999	Setting voltage signal transformation ratio = 1 / 2 scale

	(Current transformation ratio) R.CT	1-9999	Setting current signal transformation ratio = 1 / 2 scale
(Communication Parameters) bUS	(Address) ADDR	1-247	Instrument address range 1-247
	(Communication speed) BAUD	4800~9600	Default is 9600
	Protocol DATA	o.8.1; e.8.1; n.8.1	Factory default communication mode for the word (n.8.1)
(Digital output setting) DO-1 to DO-2	(Output type) TYPE	r.n, Alr, OFF	Default is Alr
	(Set output delay) DELY	0000~9999	Default is 0010
	Choose the electrical parameter PARA	I3-H, PS-H...U3-H	Default is I3-H
	(Set the alarm value) VALU	0000~9999	Default is 0050
	hysteresis value HYS	4800~9600	Default is 4800

7.4.- Display Character instructions

PRSS	User passwords	USCL	Input voltage range selection
Erro	Input error	I.SCL	Input current range selection
-I n.-	User settings menu	r. Ct	Set CT ratio
bUS	Communication settings menu	r. Pt	Set PT ratio
SCAL	Shows scal input value	LI nE	Select phase
Pol t	Set the decimal point	do-1	Route 1 switch output settings
dAtA	Communication parameter setting	do-2	Route 2 switch output settings
Addr	Metter address setting	SYS	System parameter settings
bAUD	Baud rate	TYPE	Choose set parameter
o.8.1	8 data bits, 1 stop bit, even parity	PARA	The corresponding parameters
e.8.1	8 data bits, 1 stop bit, odd parity	VALU	Set the alarm value
n.8.1	8 data bits, 1 stop bit, no parity	LdI S	Show Low alarm setting
SUR E	Confirm the change	HdI S	Show High alarm setting
Code	System password		

8.- COMMUNICATION INTERFACE

8.1.- Connection for the RS485 BUS

The composition of the RS-485 cabling must be carried out with a meshed screen cable (minimum 3 wire), diameter of not less than 0.5mm², with a maximum distance of 1,200 meters between the MCM1000 and the master unit. This Bus may connect a maximum of 247 MCM1000

Note:

1. Full range of MCM1000 meter RS485 PIN number is 58,59,60
2. Due to product modifications or custom requirements, the interface pin place may be change.
For details, please refer to product label on the rear board

8.2.- MODBUS © protocol

Modbus RTU Frame Format:

Address code	1 BYTE	<i>Slave device address 1-247</i>
Function code	1 BYTE	<i>Indicates the function codes like read coils / inputs</i>
Data code	4 BYTE	<i>Starting address, high byte Starting address, low byte Number of registers, high byte Number of registers, low byte</i>
Error Check code	2 BYTE	<i>Cyclical Redundancy Check (CRC)</i>

MODBUS FUNCTIONS

Code:	Meaning:	Description:
FUNCTION 03	Reading of n Words	<i>This function permits to read all the electrical parameters of the BJ...series.</i>
FUNCTION 06	Write of Registers	<i>Write value in to the relevant register</i>

Notes: Blue Jay Default disable the write function, if want change configuration via RS485, please contact Blue Jay Sales Team before your order.

8.3. - Register address table

8.3.1- Basic Power Data—Primary Side

Address	Data	Byte mode		Instruction
0x00	Ua	float	2	Channel_1 Phase to Line Voltage, Unit: V
0x02	Ub	float	2	
0x04	Uc	float	2	
0x06	Uab	float	2	Channel_1 Phase to Phase Voltage, Unit: V
0x08	Ubc	float	2	
0x0a	Uca	float	2	
0x0c	Ia	float	2	Channel_1 Three phase Current, Unit: A
0x0e	Ib	float	2	
0x10	Ic	float	2	
0x12	Pa	float	2	Channel_1 Individual phase active power, Unit: kW
0x14	Pb	float	2	
0x16	Pc	float	2	
0x18	$P\Sigma$	float	2	Channel_1 Total active power, Unit: kW
0x1a	Qa	float	2	Channel_1 Individual phase reactive power, Unit: kVar
0x1c	Qb	float	2	
0x1e	Qc	float	2	
0x20	$Q\Sigma$	float	2	Channel_1 Total reactive power, Unit: kVar
0x22	Sa	float	2	Channel_1 Individual apparent power, Unit: kVA
0x24	Sb	float	2	
0x26	Sc	float	2	
0x28	$S\Sigma$	float	2	Channel_1 Total apparent power, Unit: kVA
0x2a	PFa	float	2	Channel_1 Individual power factor, 0~1.000
0x2c	PFb	float	2	
0x2e	PFc	float	2	
0x30	$PF\Sigma$	float	2	Channel_1 Total power factor, 0~1.000
0x32	FR	float	2	Channel_1 Frequency, Unit:0.01Hz
0x34	Ep+	float	2	Channel_1 Positive active energy, Unit: kWh
0x36	Ep-	float	2	Channel_1 Negative active energy, Unit: kWh
0x38	Eq+	float	2	Channel_1 Positive reactive energy, Unit: kWh
0x3a	Eq-	float	2	Channel_1 Negative reactive energy, Unit: kWh
0x64~ 0x9e	/	float		Channel_2 Electrical data

0xc8~ 0x102	/	float		Channel_3 Electrical data
0x12c~ 0x166	/	float		Channel_4 Electrical data
0x190~ 0x1ca	/	float		Channel_5 Electrical data
0x1f4~ 0x22e	/	float		Channel_6 Electrical data

Float data follow IEEE754, float low bit first, high bit next. (CD AB)

8.3.2 - Basic Power Data—Secondary Side

Address	Data	Byte mode		Instruction
0x258	Ua	int	1	Channel_1 Phase to Line Voltage, Unit: 0.1V
0x259	Ub	int	1	
0x25a	Uc	int	1	
0x25b	Uab	int	1	Channel_1 Phase to Phase Voltage, Unit: 0.1V
0x25c	Ubc	int	1	
0x25d	Uca	int	1	
0x25e	Ia	int	1	Channel_1 Three phase Current, Unit: 0.001A
0x25f	Ib	int	1	
0x260	Ic	int	1	
0x261	Pa	int	1	Channel_1 Individual phase active power, Unit: W
0x262	Pb	int	1	
0x263	Pc	int	1	
0x264	$P\Sigma$	int	1	Channel_1 Total active power, Unit: W
0x265	Qa	int	1	Channel_1 Individual phase reactive power, Unit: Var
0x266	Qb	int	1	
0x267	Qc	int	1	
0x268	$Q\Sigma$	int	1	Channel_1 Total reactive power, Unit: Var
0x269	Sa	int	1	Channel_1 Individual phase apparent power, Unit: VA
0x26a	Sb	int	1	
0x26b	Sc	int	1	
0x26c	$S\Sigma$	int	1	Channel_1 Total apparent power, Unit: VA
0x26d	PFa	int	1	Channel_1 Individual power factor, 0~1.000
0x26e	PFb	int	1

0x4db	Voltage transformation ratio	Int	1	1-9999
0x4dc	Channel_1 CT ratio	Int	1	1-9999
0x4dd	Channel_2 CT ratio	Int	1	1-9999
0x4de	Channel_3 CT ratio	Int	1	1-9999
0x4df	Channel_4 CT ratio	Int	1	1-9999
0x4e0	Channel_5 CT ratio	Int	1	1-9999
0x4e1	Channel_6 CT ratio	Int	1	1-9999
0x4e2~ 0x4ed	Channel_7~18 CT ratio	Int	1	1-9999 (only for single phase type)
0xbb8	Clear energy counter	Int	1	Send code: 0x0A0A,

Note:

1. Not all of the data above can be read by RS485, the reading address will be unsuccessful
2. The data can be read out depends on your multi-function meter model, please refer to the corresponding product manual before build your software.
3. Some software has different definitions of the start bit of register address, there will be offset, please add 1 for the right address. To get more info, please contact technical support tech@cqbluejay.com

8.4.- Example

Host to Slave inquiry

Addr	Fun	Data Address (high)	Data Address (low)	Data Number (high)	Data number (low)	CRC16 (low)	CRC16 (high)
0CH	03H	00H	00H	00H	06H	C4H	D5H

PC user ask upload UA, UB, UC, IA, IB, IC

Slave to Host answer

Addr	Fun	Byte count	Data1 high	Data1 low	Data2 high	Data2 low	Data3 high	Data3 low
0CH	03H	0CH	03H	E8H	03H	E9H	03H	E8H
Data4 high	Data4 low	Data5 high	Data5 low	Data6 high	Data6 low	CRC16 low	CRC16 high	
13H	84H	13H	88H	13H	8AH	A6H	D6H	

Show the data:

UA=3E8H (100.0)
 UB=3E9H (100.1)
 UC=3E7H (99.9)
 IA=1384H (4.996)
 IB=1388H (5.000)
 IC=138AH (5.002)

Notes:

1. User can write register data for meter testing and remote control the meter
2. When the write is unsuccessful, no return data from the slave, in this addition, user can send write inquiry again

9. - SAFETY CONSIDERATIONS

All installation specification described at the previous chapters named:
INSTALLATION AND STARTUP, INSTALLATION MODES and SPECIFICATIONS.

Note that with the instrument powered on, the terminals could be dangerous to touching and cover opening actions or elements removal may allow accessing dangerous parts. This instrument is factory-shipped at proper operation condition.

10. - MAINTENANCE

The MCM1000 does not require any special maintenance. No adjustment, maintenance or repairing action should be done when the instrument is open and powered on, should those actions are essential, high-qualified operators must perform them.

Before any adjustment, replacement, maintenance or repairing operation is carried out, the instrument must be disconnected from any power supply source.

When any protection failure is suspected to exist, the instrument must be immediately put out of service. The instrument's design allows a quick replacement in case of any failure.

For any inquiry about the instrument performance or any failure,
contact to Blue Jay's technical service.
